

Given a **base network**: 116.63.208.0/21 , split it into five subnetworks (N1, N2, N3, N4 and N5), such that each subnetwork can hold:

- **N1**: 320 IPs
- **N2**: 320 IPs
- **N3**: 160 IPs
- **N4**: 120 IPs
- **N5**: 30 IPs

Questions:

Use DHCP to assign IPs to your hosts.

Configure dynamic routing.

What's the maximum number of IP's that your base can hold ?
