

Duo

/duu-o/ • noun, title

the safest application to keep improving your skills. also known as the idea on which Duolingo just slapped an owl and called it a day.

today's agenda

- ① the problematic context
- ② the solution - the concept of Duo
- ③ the team
- ④ our experience
- ⑤ live demo of Duo

The Problem

The need of reskilling

According to the World Economic Forum, automation will disrupt 22 % of all jobs by 2030, displacing 92 million roles and creating 170 million new ones.

Addressing the sweeping changes outlined in the report requires urgent and collective action across government, business and education. Key priority areas include bridging skills gaps, investing in reskilling and upskilling initiatives and creating accessible pathways into fast-growing jobs and skills that are seeing fast growth in demand. -

The Problem

Low impact of traditional courses

Massive Open Online Courses (MOOCs) have a median of completion of just 12.6%. That's a worse survival rate than houseplants in a dorm room.

*Massive Open Online Courses (MOOCs) have received significant global attention but face substantial criticism due to their low completion rates on mainstream platforms. - Celik et. al., **Uncovering MOOC Completion: A Comparative Study of Completion Rates from Different Perspectives***

The Problem

High rate of underskilled developers

As the world of technology continues to innovate and evolve, businesses are struggling to find the requisite software talent who have the technical skills and expertise required to facilitate these advancements in the field.

Following the Great Resignation, the software industry is still facing a talent shortage. More and more businesses need to ramp up their development teams. This is not solely limited to software companies. Today, the developer shortage extends to organizations of all different types and sizes because practically every company needs technical talent to some extent.

Our Solution

Duo — Duolingo, but for everything else

Imagine Duolingo's streak-addiction, XP, and dopamine — aimed at programming, data, design, and every hard skill HR can't hire for. **Because '¿Dónde está la biblioteca?' won't help you debug at 2 a.m.**

Our solution

Our Duo - Everything but the owl

Exercises & Exams

After completing a set of practice questions, you can be examined with the exam questions - designed to fairly evaluate your skills.

Roadmap

The user-friendly Roadmap manages your current progress and ensures you are only taking exams after you learned and mastered the practice questions.

Courses

As a user you can enroll in multiple courses based on the skills you want to develop. The courses are arranged with certain hashtags and descriptions to perfectly match what you are looking for.

Community

While practicing some powerful skills, the Community feature allows you to talk to other learners, start a posting thread for discussion and also filter the posts and mark your favourite ones.

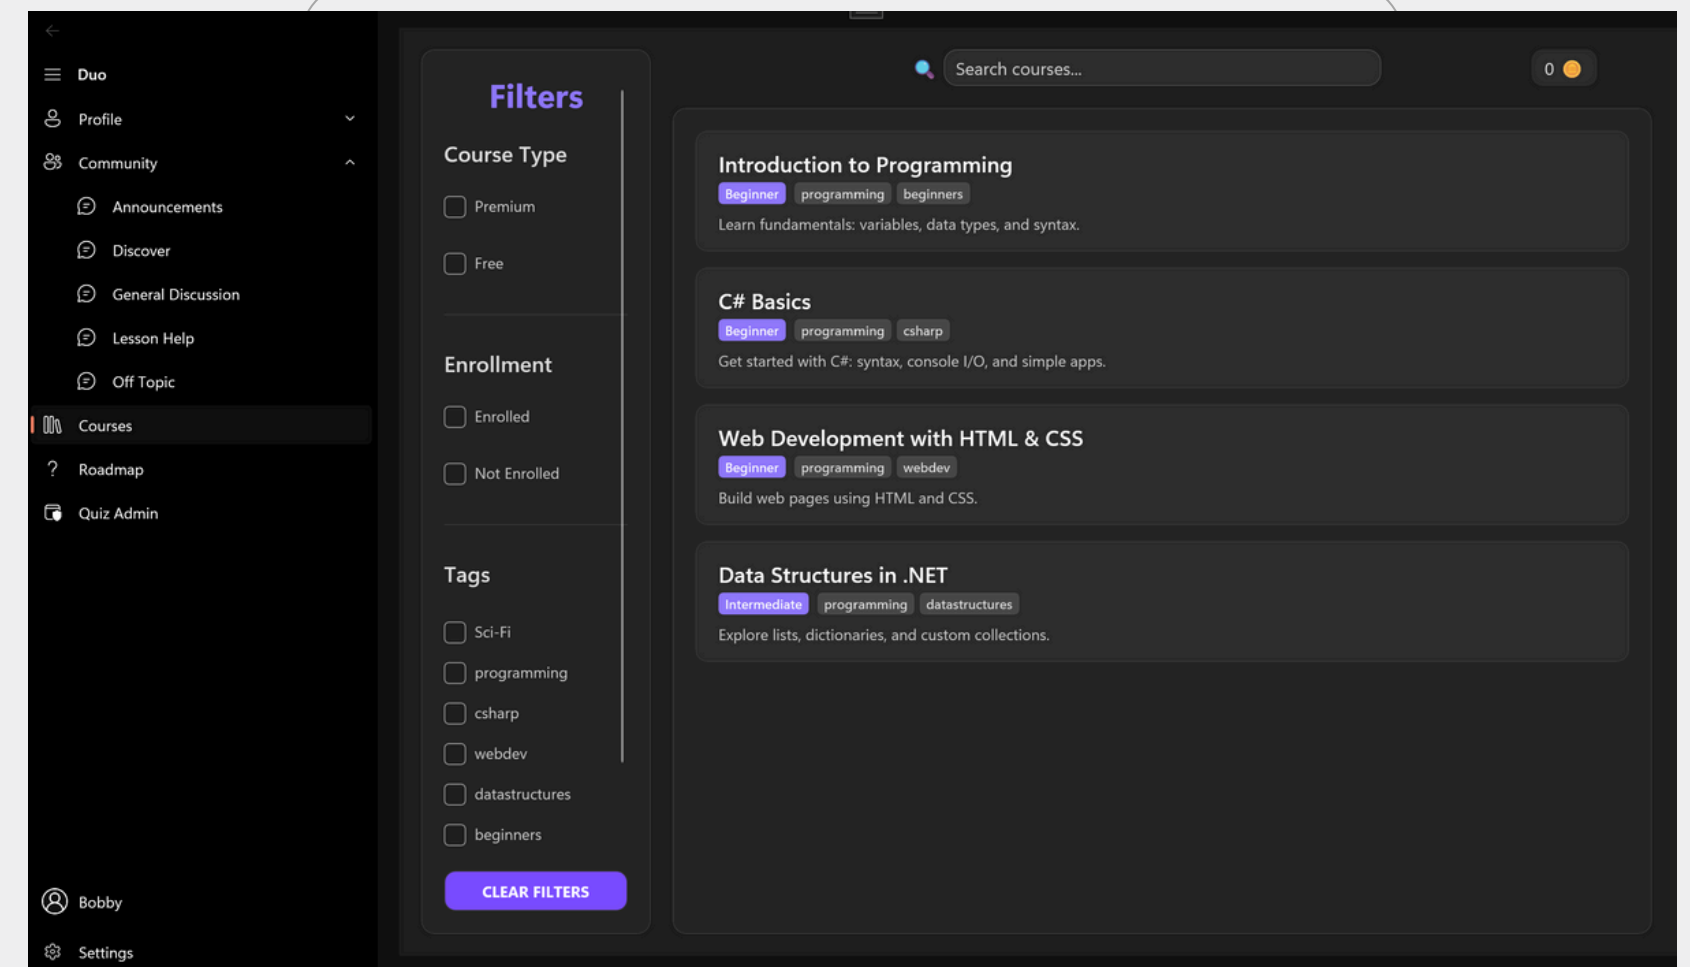

Our Duo

Courses

As a user, you can enroll yourself into courses that fit your learning goals. Once enrolled into a course, certain theory information and exercises will automatically be assigned to you in order to accomplish your learning goal.

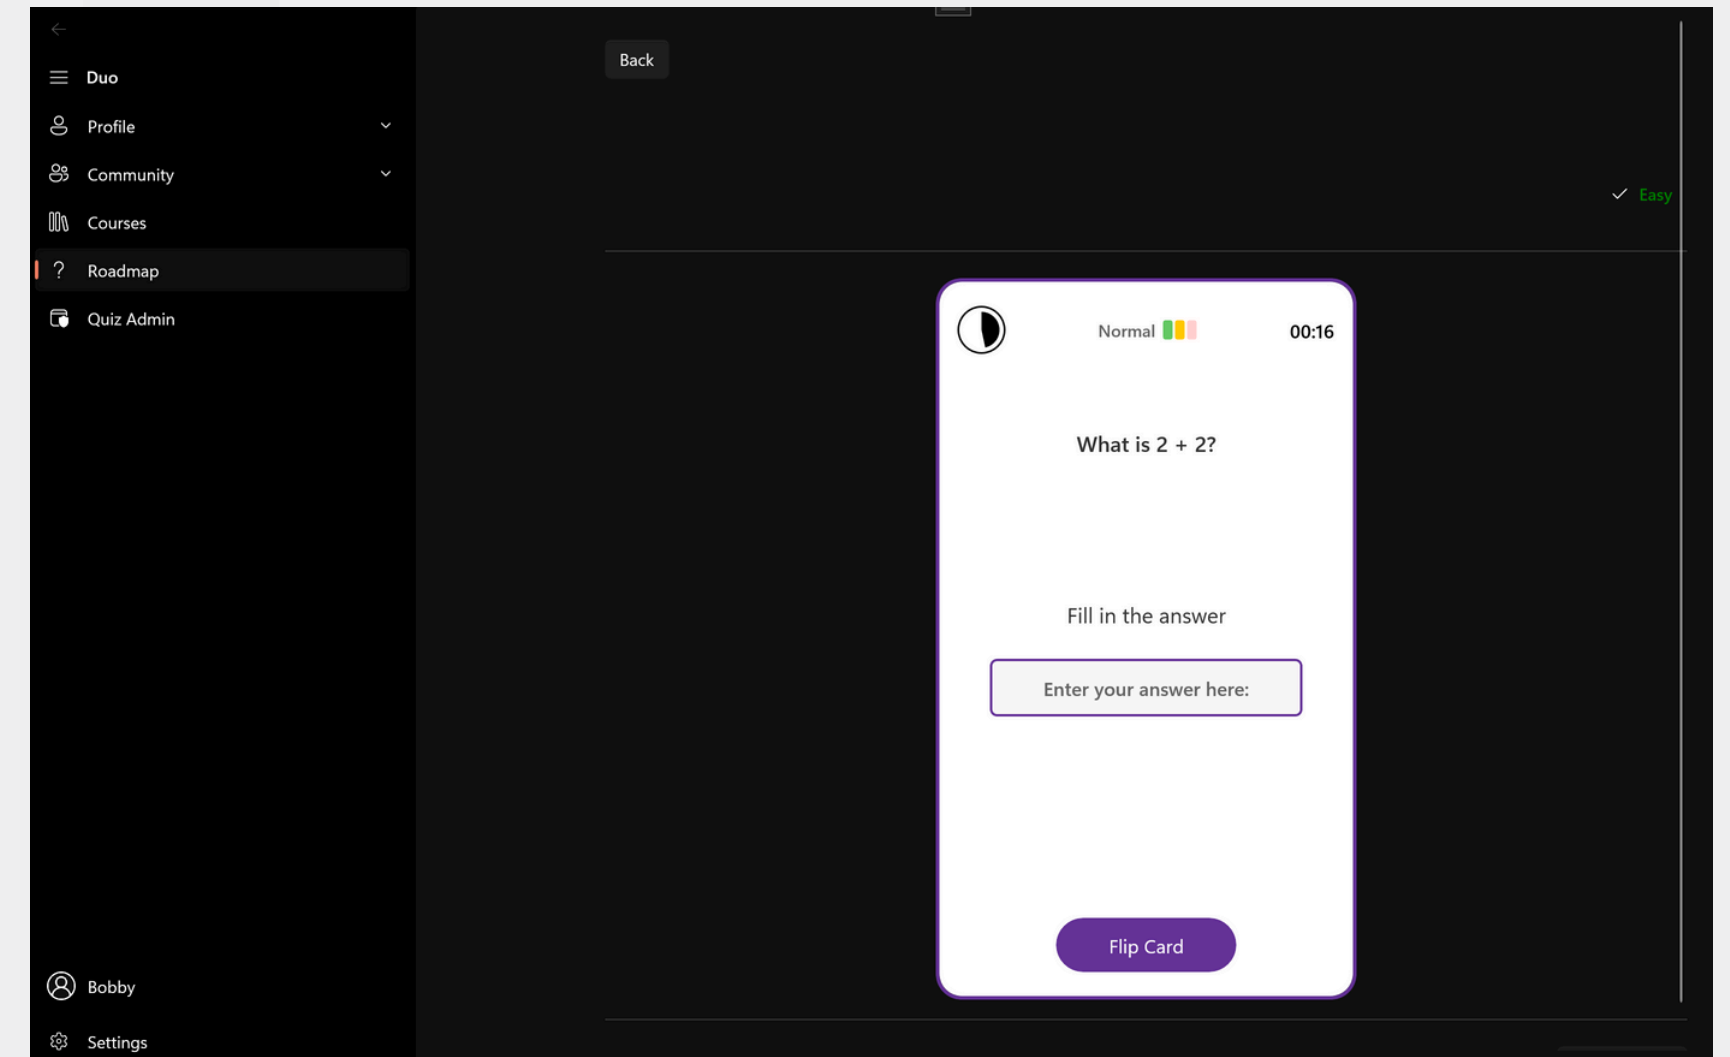

Our Duo

Exercises & Exams

Our exercises help you understand key concepts and practice on them until you are ready to certify yourself within the exam. In other words, our exercises are the only class you can finish while your coffee's still too hot to drink.

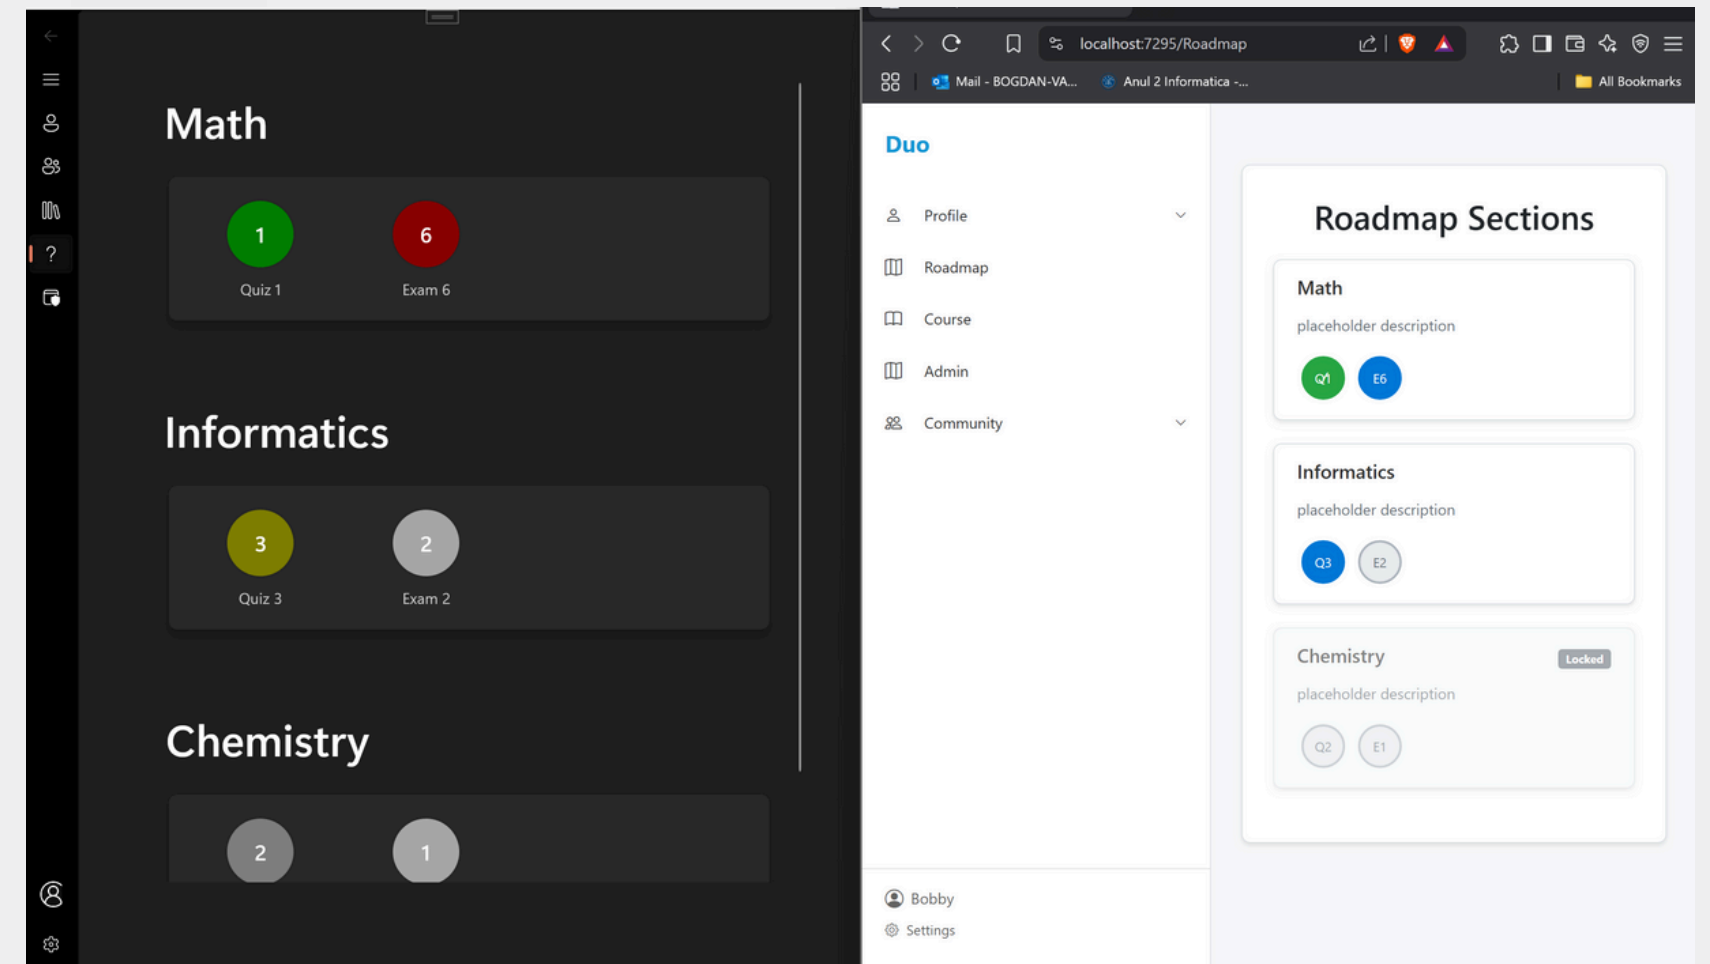

Our Duo

Roadmap

The Roadmap keeps track of your progress and ensures you are not taking on exams before learning. So no more ‘final-boss first’ speedruns.

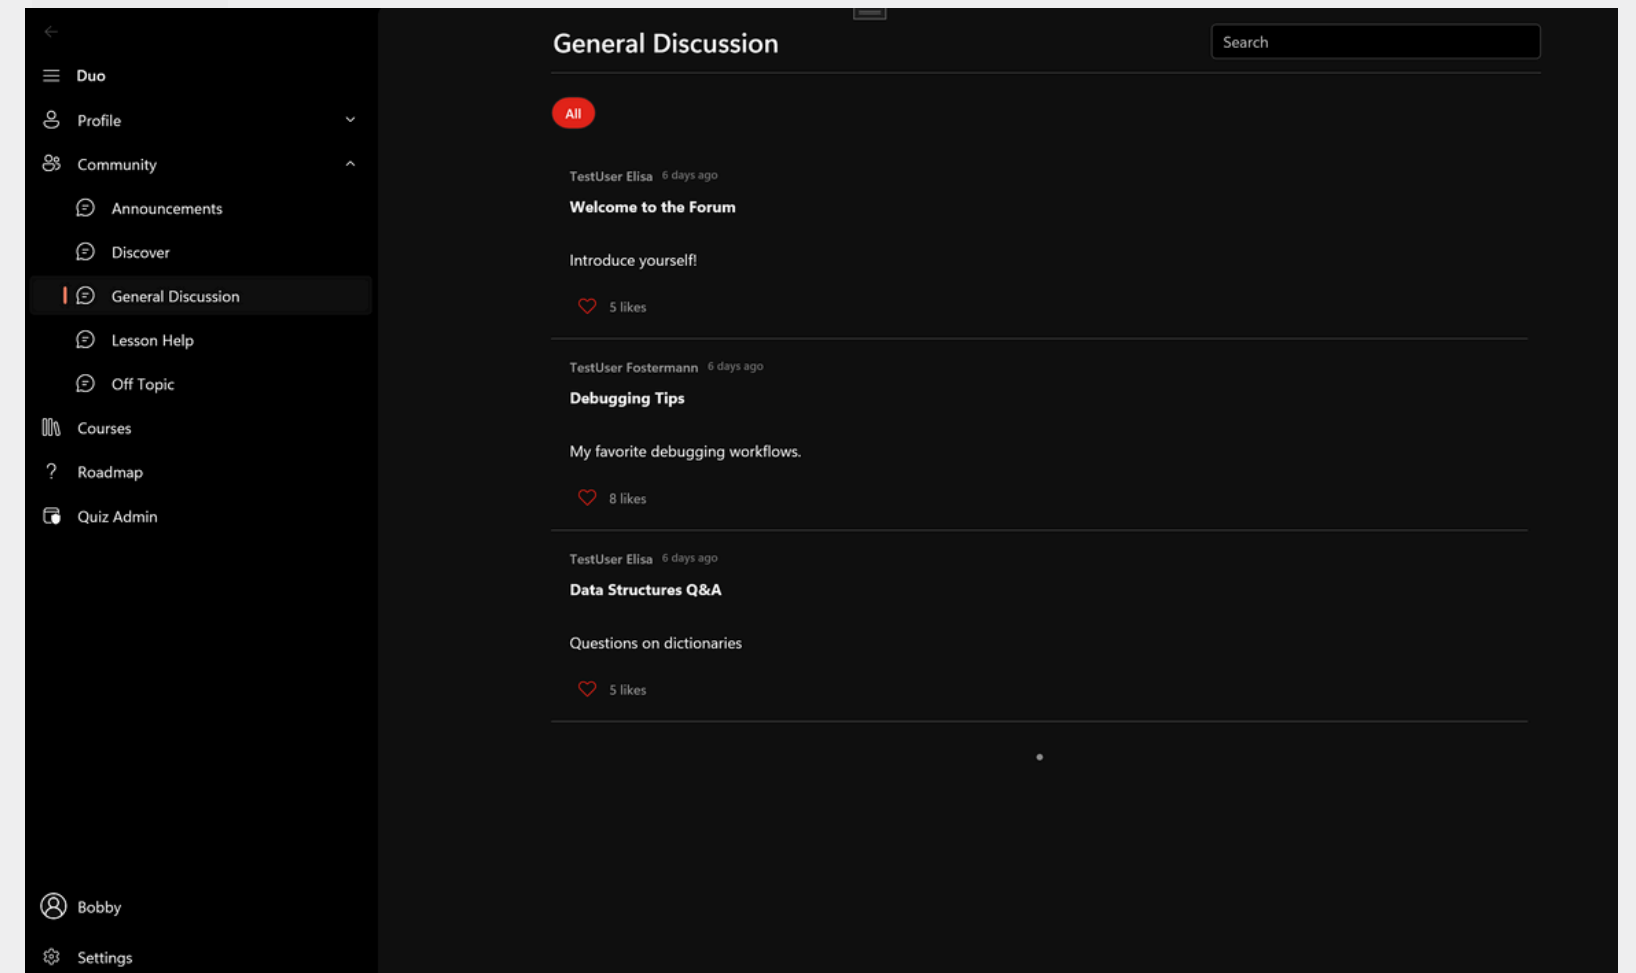

Our Duo

Community

The community gives Stack Overflow vibes, without the judgmental eye-roll responses.

Our Experience

ISS is like a betting slip, most of the time you suffer, but when it comes out you're happy - Vlad Cenușe

Being exposed to teamwork throughout this project was something I truly valued. Even though it was challenging at times, learning to get along and collaborate effectively made me feel more prepared. - Cristian Țiuț

My experience working on the software development course project was a truly fruitful one, from which I learned a lot. It was my first time collaborating with a team to build an actual application, and I appreciated how the project constantly evolved — it pushed me to adapt and grow along the way. - Sebastian Șoptelea
